## 💼 PROFESSIONAL EXPERIENCE

**Full Stack Developer Intern,** *Ambisense*                     Jun 2022 – Sep 2022
Over my internship, at Ambisense I worked on a wide array of projects                     Dublin, Ireland
with varying technologies. I mostly used Python, Javascript, and bash
during my internship. My projects include a script that could perform
data analytics on client data to provide meaningful insights, manage
the backend of a server, and create artificial data for script testing.
While developing my coding skills I also developed key skills in
communication and working with a team.

---

## 📁 PROJECTS

**Ordeo** ⧉
Ordeo is an inventory ordering system that uses React/Redux/Django Rest/Axios.
This project has 4 main functions: Authentication, Product Management, Product
Purchasing, and Order Tracking.
In making this project I learned about REST Api's, React Development, and Tech Stacks.

**Remback** ⧉
Remback is an image matting AI that uses React/Redux/Django Rest/Axios to remove
backgrounds.
The AI used is ZHKKKE's MODNet.
The image is processed on a Django REST backend and returned via an API Response
which is then processed on the React Frontend.
This project taught me how to use AI in a tech stack.
